Products

We customise all types of **electrical insulation sheets** for use in LED Drivers, EV Motors, EV chargers, electronic ballasts, etc. We offer the best in **steel rule die cutting** and **Mylar die cut parts**. Perfect Insulations will exactly **bend, fold, form or punch** your choice of flexible materials (up to 350 microns) as per your precise requirements.

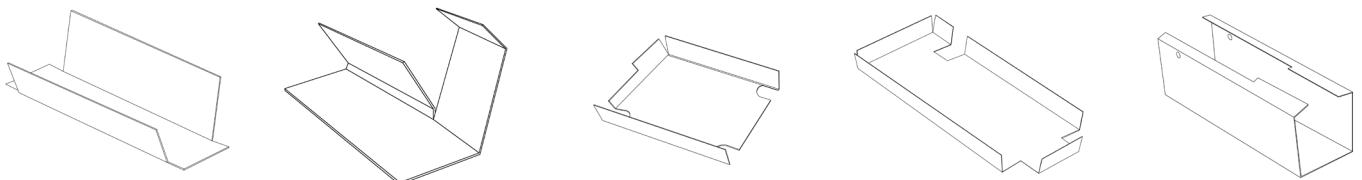

Quality

We procure the **highest quality raw material** to ensure the best product.

We take utmost care of the quality in processing our orders. Each lot goes through **3 levels of inspection** to maintain the highest level of perfection.

We keep on assessing the **new developments** in customization of insulation material and **improve** our 'set scheme' whenever the need occurs.

About us

1995 to 2006

We used to manufacture insulation raw materials like handmade paper bobbins in 2 and 3 layers which were used in manufacturing conventional magnetic ballasts. Our major clients were the ancillaries of Mysore Lamps, Crompton, Seema, Phillips and many of the local brands.

2007 to 2012

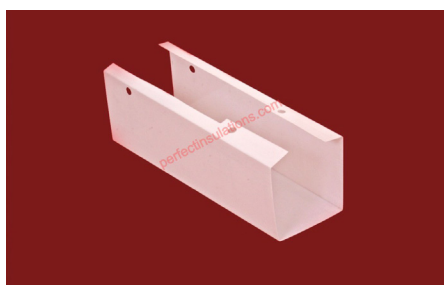

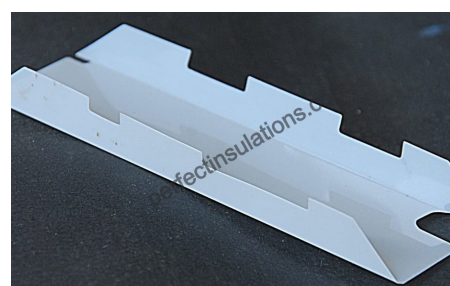

We used to supply punched insulation sheets. In 2012, we also started the customization of polyester film, nomex and triplex by punching and folding.

Our production facility specializes in **steel rule die cutting, punch pressing, and slitting operations**, as well as in-house custom die creation, tooling, and hot bending. We can process orders anywhere in size, from **one-off prototypes** to **large orders** and long-term inventory contracts. From prototypes to large scale production volume runs, Perfect Insulations will produce and deliver your order in a **prompt** and **efficient** fashion.

Vision

Our aspiration is to be the world's most trusted insulation partner providing high performing and smart insulation solutions and services for a better world.

We are a company, a brand, a family that cares for and puts the needs of its customers first.
